

CLEF eHealth 2020

[@clefehealth](#)

CLEF eHealth 2020

Task 1: Multilingual Information Extraction (IE)

ICD Coding from Spanish clinical documents

*Organizer: Martin Krallinger, Barcelona
Supercomputing Center*

Task 2: Consumer Health Search (IR)

Same documents

New pool of documents assessed

New subtask: spoken queries

*Organizers: Lorraine Goeuriot, Liadh Kelly, Joao
Palotti, Hanna Suominen, Guido Zuccon*

Why should I consider CLEF eHealth if I do not do research in the health space?

- Show that **your techniques work across** different domains and data/tasks
- Often problems in this domain are the **fundamental problems** we find across IR, just exacerbated
 - Semantic gap, Query formulation, Result understanding, Cognitive biases, incorrect information/unreliable
- Large **societal impact**: advances in these tasks could translate into better health, society, economy
- Good field for attracting research **funding!**
